Practicum Homework #4: Current Status Report

Team 5: Jianyu Hao, Jaeyoon Lee, Kelly Makinster, Sean Schorzman

10/30/19

Our team has acquired most of the essential parts needed for the project in time to be assembled. We have also ensured the parts' functionality to make sure they work when assembled on the breadboard together. With the preliminary schematic designed for our project, we built our first prototype on a breadboard at its rough stage. Currently, we've completed most of the assembly and double checked to make sure the parts function as they should. More research will be conducted in the upcoming week to complete the prototype and begin the first testing.
